

Hyundai Motor India (HMIL) vs Kia India:

Manufacturing, Platforms, Powertrains & Exports —

Institutional Research Briefing

*As of 18 August 2026. Actuals vs company guidance vs press estimates flagged throughout.
"c." = circa.*

TL;DR

- **HMIL runs two plants (Chennai + Pune) rated at 9.94 lakh units/yr and targets 11.44 lakh by FY30; Kia India runs one plant (Anantapur) rated at c.3 lakh (management now cites 4.30 lakh) and is studying a +2 lakh line toward c.5 lakh.** Both are Hyundai Motor Group subsidiaries and share platforms and engines extensively — Creta and Seltos are platform cousins (K2: SU2i / SP2i), Venue and Sonet share the K2-based small-SUV architecture, and E-GMP underpins Ioniq 5 / EV6 / EV9.
- **Engine displacement (1.0/1.2/1.5/1.6/2.0 = litres) drives Indian tax:** post-22 September 2025 GST 2.0, sub-4m cars with ≤1,200cc petrol or ≤1,500cc diesel are taxed 18% vs 40% for everything larger — the single biggest driver of the sub-4m SUV product strategy for both brands.
- **Hyundai exports c.21% of output (targeting 30% by 2030) and is HMC's largest cumulative export hub; Kia exports far less (c.27,953 units in FY26, c.10% of output) after deliberately reprioritising domestic demand.** The user's belief that "Kia does not export" is incorrect — Kia does export, but at a fraction of Hyundai's scale and structurally declining from a FY23 peak.

Key Findings

1. HMIL capacity: 9.94 lakh now, 11.44 lakh by FY30 (company-confirmed). The Sriperumbudur (Chennai) plant had installed capacity of 824,000 units as of 30 June 2024 (DRHP). Talegaon (Pune), acquired from GM, began vehicle production in October 2025 at 170,000 units/yr, ramping to 250,000 by 2028. HMIL's FY26 BRSR (filed 3 August 2026) confirms total capacity of 9.94 lakh units, expanding to 11.44 lakh by 2030.

2. Kia India capacity: c.3 lakh installed base; management now cites 4.30 lakh; +2 lakh line under study. Anantapur reached 3 lakh units/yr with a third shift added February 2022. Atul Sood, Senior VP Marketing & Sales, Kia India, told Team-BHP (August 2026): "Currently,

the annual manufacturing capacity at Kia's Anantapur plant stands at 4,30,000 units," adding India "is Kia's fourth-largest market and accounts for 10% of the brand's global sales."

Team-BHP Kia is separately studying a new c.2 lakh-unit line, per an Autocar Professional exclusive (15 August 2026).

3. Platforms are extensively shared across the two brands, but bodies/interiors/tuning are differentiated. Creta (SU2i) and Seltos (SP2i) both sit on the Hyundai-Kia K2 platform, as do Alcazar, Carens and (Indonesia) Stargazer. Venue (QXi) and Sonet (QY) share the K2-based small-SUV architecture. Exter (AI3), Grand i10 Nios/Aura (AI3) and Kia Syros (AY) share the K1 platform. E-GMP underpins Ioniq 5, EV6 and EV9.

4. Engines are group-common; the "Hyundai builds diesels / Kia builds petrols" split is an oversimplification. Hyundai Motor Group develops each engine family once and fits it across both badges. **Engine Zone** Key India engines: 1.2 Kappa NA petrol, 1.0 Kappa/Smartstream turbo-GDi 3-cyl petrol, 1.5 Smartstream NA petrol, 1.5 T-GDi petrol, 1.5 U2 CRDi diesel, plus the 2.2 CRDi (Carnival) and 2.0 R diesel (Tucson).

5. Exports: Hyundai is the anchor; Kia is small and shrinking. Hyundai India exported 163,386 units in FY25 (c.21% of sales) and targets 30% of output by 2030. Kia India exports peaked at 85,756 units in FY23 and fell to c.27,000 by FY25–FY26 as it prioritised the domestic market.

Details

1. Manufacturing facilities — locations and capacity

Hyundai — Sriperumbudur (Chennai / Irungattukottai), Tamil Nadu

- Installed capacity: **824,000 units/yr as of 30 June 2024** (HMIL DRHP; the first HMC integrated plant outside Korea, commercial production from September 1998).
Chittorgarh HMIL's 2023 Tamil Nadu MoU targeted raising Chennai capacity from 775,000 to 850,000.
- Utilisation: Chennai runs at **over 90%** capacity per trade press/analyst commentary (October 2025) — a press/channel characterisation, **not company-confirmed**.
- Integrated unit (stamping/press, weld, paint, assembly) on Hyundai Autoever's smart-factory platform; historically makes essentially all HMIL models. Management (May 2026) confirmed the next two all-new nameplates (a mass-market compact e-SUV and a new ICE mid-size SUV, FY27) will be built at Chennai; FY27 Chennai upgrade capex is c.₹7,500 crore. **Business Standard**

Hyundai — Talegaon (Pune), Maharashtra (acquired from General Motors)

- Asset Purchase Agreement signed 16 August 2023 (Davos); acquisition completed early

2024. At acquisition the plant had c.130,000 vehicles + c.160,000 engines annual capacity.

- HMIL committed an initial ₹6,000 crore to upgrade the plant, later enhanced to **₹11,000 crore** (announced September 2025 with CM Fadnavis, up c.57% from an original c.₹7,000 crore commitment).
- **Engine production commenced 16 June 2025** (Autocar Professional); vehicle production commenced **October 2025**, with the new-generation Venue the first model off the line (also first from Pune, and Bharat NCAP 5-star).
- Phased capacity: **170,000 units/yr at start → 250,000 by 2028**.
- Combined HMIL capacity: **9.94 lakh now → 10.74 lakh by 2028 → 11.44 lakh by FY30** (FY26 BRSR). Elara Securities cites 1.14 million by FY30. HMIL management says India will become the third country (after Korea and the US) to cross 1 million units of HMC production capacity by FY28. [Business Standard](#)
- Talegaon is positioned as a multi-model export hub (HMC's September 2025 CEO Investor Day cited "250,000 units from the Pune multi-model export hub in India").
[Hyundai Motor Group](#)

Hyundai — R&D and engine facilities

- Existing R&D: Hyundai Motor India Engineering Pvt Ltd, Hyderabad, on 15 acres, coordinating with Namyang (Korea); being developed as HMC's global hub for compact passenger-vehicle R&D. [Autocar Professional](#)
- New facility: **Hyundai Global Innovation R&D Centre at Zaheerabad NIMZ (Sangareddy district, Telangana)** — ₹8,528 crore investment across 675 acres, approved by Telangana's Industrial Promotion Sub-Committee 25 May 2025; includes an automotive test track, pilot line and prototyping systems; c.4,276 jobs. [NewsBytes](#) Land scaled from an initial 400 acres (November 2024) to 675 acres. [The Munsif Daily](#) Led directly by Hyundai Motor Company (an extension of HMIL's Hyderabad base). [Deccan Chronicle](#)

Kia India — Anantapur, Andhra Pradesh

- c.\$1.1 billion plant, over c.536 acres; mass production began August 2019.
- Installed capacity: **3 lakh units/yr with a third shift from 28 February 2022** (Kia said it hit 100% utilisation at that level). Management in 2026 now cites **4.30 lakh** units annually (Atul Sood, Kia India, via Team-BHP) — this uplift likely reflects debottlenecking/line-balancing rather than a formally announced new line; flag as company-stated but **not independently reconciled** with the earlier 3 lakh figure.
- Expansion: Kia is **studying a new c.2 lakh-unit line** — per Autocar Professional exclusive (Ketan Thakkar & Hormazd Sorabjee, 15 August 2026): "Kia India has started evaluating a

new production line with an annual capacity of around 2 lakh units at its Anantapur plant... The proposal is at an early stage, and a final investment decision has yet to be taken."

Autocar Professional On the c.3 lakh base, "the proposed line could lift potential capacity to about 5 lakh units annually... exports potentially taking its overall production requirement closer to half a million vehicles." Autocar Professional

- Second plant: periodically explored (Autocar reports since c.2021) but not committed; current expansion is centred on Anantapur.
- Carnival: locally assembled via CKD/SKD at Anantapur (2.2 diesel + 8-speed AT; c.₹59.4 lakh Limousine Plus). Autocar India

Engine cross-supply within the group in India: Hyundai Motor Group designs engines centrally and both Indian entities draw on common families. Specific India-plant engine cross-supply between HMIL and Kia India is not clearly documented in public sources — flag as a data gap.

2. Which model is made in which plant

HMIL — Sriperumbudur (Chennai): Creta, Creta EV, Exter, i20, Grand i10 Nios, Aura, Verna, Alcazar, Ioniq 5 (CKD assembly), Tucson (CKD assembly), and historically Venue. The next two all-new FY27 nameplates will be built here.

HMIL — Talegaon (Pune): New-generation Venue is the first model (production from October 2025). Talegaon progressively takes additional models as it ramps to 250,000 by 2028 and functions as a multi-model export hub.

Kia India — Anantapur: Seltos (SP2i / new gen from January 2026), Sonet (QY), Carens (KY), Carens Clavis, Syros (AY), and Carnival (CKD/SKD). **EV6 and EV9 are CBU imports** (not locally assembled — Kia decided CBU for quality/brand reasons). Autocar India Kia has said two EVs would be locally manufactured from 2025; the India-focused electrification steps are Carens Clavis EV and Syros EV.

3. Platforms — are Hyundai and Kia sharing platforms?

Yes — extensively, but with differentiated bodies, interiors and suspension tuning. Hyundai Motor Group's India-relevant architectures:

- **K1 platform** (smallest): Grand i10 Nios (AI3), Aura (AI3), Exter (AI3), Kia Syros (AY, related to Hyundai Casper).
- **K2 platform** (B/C small-SUV and compact-SUV): Venue (QXi) ↔ Kia Sonet (QY); Creta (SU2i) ↔ Kia Seltos (SP2i); also Alcazar (SU2i LWB), Kia Carens (KY), and Indonesia's Stargazer (KS). Verna/Elantra sit on K2-derived architecture. The SP2i/SU2i India Seltos/Creta are the low-cost emerging-market variants of the global SP2, closely related

1.0 Turbo-GDi	Kappa / Smartstream G1.0 T-GDi	998cc	3	Turbo	Petrol	c.120 PS / 172 Nm	Line, Verna, Sonet, Seltos, Syros, Creta (older)
1.5 NA petrol	Smartstream G1.5 MPi	1,497cc	4	NA	Petrol	c.115 PS	Creta, Seltos, Carens, Alcazar, Sonet
1.5 Turbo-GDi	Smartstream G1.5 T-GDi	1,482cc	4	Turbo	Petrol	c.160 PS	Creta, Seltos, Verna, Alcazar, Carens
1.5 U2 CRDi diesel	U II CRDi	1,493cc	4	Turbo (VGT/fixed)	Diesel	99–116 PS	Venue, Creta, Verna, Alcazar, Seltos, Sonet, Syros, Carens
2.0 MPi petrol	Smartstream G2.0	1,999cc	4	NA	Petrol	c.159 PS	Alcazar/Creta (export)
2.2 CRDi diesel	R / D4H	2,199cc	4	Turbo	Diesel	c.190–200 PS	Kia Carnival
2.0 R diesel	R2.0 D4HA	1,995cc	4	Turbo	Diesel	c.185 PS	Hyundai Tucson
E-GMP electric	—	—	—	—	BEV	varies	Ioniq 5, Creta EV, EV6, EV9

Power/torque vary by state of tune and model year. The 1.5 U2 CRDi is the group's mainstay India diesel, in c.99 PS (i20/Venue) and c.113–116 PS (Verna/Creta/Alcazar/Seltos) tunes. The global 1.6 diesel/1.6 hybrid and 1.4 T-GDi appear in export/other-market variants; the 1.6 turbo hybrid is the global next-gen Seltos powertrain (India gets a different 1.5-based hybrid).

The “Hyundai=diesel, Kia=petrol” claim: an oversimplification. Hyundai Motor Group develops each engine family once (in-house) and fits it across both badges with model-

specific ancillaries; the group has held a controlling stake in Kia since 1998. Engine Zone

There is no clean public evidence that Hyundai exclusively controls diesel allocation while Kia handles petrols — treat that specific framing as **unverified**. Both brands offer the same 1.5 diesel, 1.0 turbo, 1.2 NA and 1.5 petrol/T-GDi families.

New 1.2 3-cylinder / hybrid base engine: the next Creta/Seltos India hybrid (c.2027) is reported to pair the existing 1.5 NA petrol with two electric motors, targeting c.25 kmpl.

CarLelo A new smaller-displacement 3-cylinder engine as a hybrid base is discussed in press but **not company-confirmed** — flag as press estimate.

Transmissions:

- **Manual (MT):** 5- and 6-speed, across the range.
- **iMT (intelligent Manual Transmission):** a clutch-pedal-less manual — the driver still shifts gears with the lever, but an electro-hydraulic actuator operates the clutch, so there is no clutch pedal. Offered on Venue, Sonet, Seltos, Creta (turbo variants).
- **CVT (IVT):** continuously variable, on NA petrol variants (Creta, Seltos, Carens).
- **DCT (dual-clutch, 7-speed):** on turbo-GDi variants (Venue, i20 N Line, Sonet, Seltos, Creta, Verna).
- **Torque-converter automatic:** 6-speed on 1.5 diesel/1.5 NA variants; 8-speed AT on Carnival.

CNG, hybrids, E20:

- **Hyundai Hy-CNG Duo:** a factory bi-fuel CNG offering with twin cylinders, on Exter and Grand i10 Nios/Aura (1.2 Kappa). HMIL hit a record 18% CNG contribution in Q4 FY26.
- **Kia CNG:** Kia is adding factory-fitted CNG (planned for Carens and others) within its multi-powertrain 2030 plan; eight of ten new models to 2030 are electrified.
- **Hybrids:** both plan strong hybrids from c.2026–27 (next Creta/Seltos; Kia's electrified push). Hyundai's 26-model FY30 plan includes hybrids.
- **E20:** current-generation Hyundai/Kia petrol engines are E20-compatible (India moved to 20% ethanol blending in 2025).

5. Exports

Hyundai Motor India (actuals):

Year	Exports (units)	Note
FY23	153,019 (SIAM)	

FY24	163,155	
FY25	163,386	flat YoY; c.21% of sales (total FY25 762,052 = 598,666 domestic + 163,386 export)
FY26	grew c.9.4% YoY (co.)	exports rose to c.26% of revenue (from 22% FY25)

- Q2 FY26 exports 51,400 units (+21.5% YoY); Middle East & Africa +35%, Mexico +11%.
Republic World Q1 FY26 exports 48,140 units (+13% YoY). business-standard
- Top destinations (2024): Saudi Arabia, South Africa, Mexico, Chile, Peru. Ackodrive Key export models: Verna, Grand i10 Nios, Aura (plus Creta, Exter, Venue). Cumulatively India has exported 3.9 million units to c.150 countries; 25 years of exports completed in FY25.
- Target: 30% of output for export by 2030** (from c.21% FY25 / c.27% H1FY26). Nuvama models Middle East & Africa (50%), Central/South America (40%), Asia-Pacific (10%).
business-standard India positioned as HMC's second-largest global production/export base after Korea. Industrial Economist "Local for local" / global-south focus: Middle East, Africa, South Asia, Latin America; evaluating developed markets (Australia).
Industrial Economist
- Primary export plant: Chennai historically; Pune/Talegaon designed as the incremental multi-model export hub.

Kia India (actuals — the "Kia doesn't export" belief is INCORRECT):

Year	Exports (units)	YoY	Source
FY22	50,864	+25.8%	Business Standard (Kia financials)
FY23	85,756	+69% (best ever)	Autocar Professional / SIAM
FY24	52,105	-39%	SIAM / Tribune India
FY25	26,892	-48%	CarWale (SIAM-based)
FY26	27,953	+3.9%	Autopunditiz (SIAM-based)

- Per Autocar Professional, FY23 was Kia's best export year: "Kia India's best fiscal year export performance was in FY2023 when it shipped 85,756 units, up 69% year on year (FY2022: 50,864 units) and accounted for 13% of India Passenger Vehicle Inc's total exports of 662,891 units" — then third-highest PV exporter after Maruti Suzuki and Hyundai.
- Export share fell from c.21% of cumulative production (through April 2024) toward c.10%

as Kia reprioritised the domestic market (c.90% of output now for domestic).

- Cumulative exports c.252,830 (SIAM, to April 2024); Kia's own all-in figure (incl. CKD) c.3.67 lakh by late 2024. [Republic World](#) **Definitional gap:** SIAM CBU basis c.287,000 by February 2026 vs Kia's all-in c.3.67 lakh — different definitions, not a contradiction.
- Models exported: Seltos (c.54–58% of exports), Sonet (c.35–36%), Carens (c.7–10%), Carnival negligible (141 units). [Autocar Professional](#) EV6/EV9 are imports, not exports.
- Destinations: 100+ markets — South Africa, Chile, Paraguay, Latin America broadly; CKD to Uzbekistan, Ecuador, Vietnam; [Republic World](#) future focus Middle East and Africa.
- **India accounts for c.50% of Kia's global CKD exports;** Kia India targets **doubling CKD exports by 2030** (Joonsu Cho, Chief Sales Officer: "we aim to expand our CKD footprint to the Middle East and Africa, to double our export volume by 2030"). [Republic World](#)
- Export plant: Anantapur (sole plant).

6. Capacity utilisation and future expansion

- **HMIL utilisation:** Chennai >90% (press/channel); Pune ramping from a low base (started October 2025). No precise consolidated company figure published — flag.
- **Kia utilisation:** stated 100% at 3 lakh (February 2022); with management now citing 4.30 lakh capacity, implied utilisation on the higher base is lower but not disclosed. FY26 sales momentum strong — Kia's sales rose 17% to 191,949 units in the first seven months of 2026 (Atul Sood). [Team-BHP](#)
- **HMIL capex: ₹45,000 crore / c.\$5 billion FY26–FY30** (confirmed in FY26 BRSR; reiterated at HMIL's first Investor Day, 15 October 2025 Mumbai, and HMC's September 2025 CEO Investor Day: "In India, we will launch 26 new vehicles by 2030 and India's first locally designed, engineered, and manufactured electric SUV by 2027, backed by a \$5 billion investment through 2030"). [Hyundai](#) Covers manufacturing expansion (9.94→11.44 lakh), electrification, R&D and future mobility; 26 new models/variants by FY30 (20 ICE + 6 EV, plus hybrids). HMIL has invested ₹40,700 crore since inception. Nuvama models a multi-powertrain mix of 13 ICE, 5 EV, 8 hybrid, 6 CNG by FY30E; EVs c.17% of portfolio by FY30E (from c.1% FY25); ICE localisation from 82% to 90%. [business-standard](#)
- **Kia investment / 2030 targets:** domestic sales of **4.10 lakh units and 7.6% market share by 2030** (Atul Sood: "Mid-term, we are targeting sales of 4,10,000 units, which should give us a market share of 7.6%"), [Team-BHP](#) c.800 sales/service touchpoints, [Autocar Professional](#) 10 new models (8 electrified). Kia's global Plan S targets India electrified mix of 43% by 2030.
- **Battery localisation:** Hyundai + Kia signed an MoU with **Exide Energy Solutions (April 2024)** for locally produced **LFP cells** for India EVs (Exide's Bengaluru facility). Exide MD

Avik Roy has since said the Hyundai-Kia project is **delayed** and will not be completed in the current calendar/financial year; it is a co-investment, "half a line customised for Hyundai," separate from Exide's 6 GWh Bengaluru line. [FranchiseIndia.com](https://www.franchiseindia.com) Exide separately holds an SVOLT technology licence. Hyundai also announced a ₹700 crore **battery-pack assembly plant in Chennai** (first-phase 75,000 packs/yr by 2025).

- **New plant/land:** Hyundai — Talegaon (done) + Zaheerabad R&D (675 acres). Kia — studying +2 lakh line at Anantapur; second plant explored but uncommitted.

7. Comparison table — HMIL vs Kia India

Dimension	HMIL (Hyundai)	Kia India
Plants	2: Sriperumbudur (Chennai, TN) + Talegaon (Pune, MH)	1: Anantapur (AP)
Installed capacity	9.94 lakh/yr (824k Chennai as of Jun-24 + Talegaon 170k, Oct-25)	c.3 lakh base; mgmt cites 4.30 lakh (2026)
Utilisation	Chennai >90% (press); Pune ramping	100% at 3 lakh (2022, co.)
2028 / 2030 capacity	10.74 lakh (2028) → 11.44 lakh (FY30)	+2 lakh line under study → c.5 lakh potential
Models per plant	Chennai: Creta/Creta EV/Exter/i20/Nios/Aura/Verna/Alcazar/Ioniq 5 (CKD)/Tucson (CKD). Pune: new Venue + more	Anantapur: Seltos/Sonet/Carens/Syros/Carnival (CKD). EV6/EV9 = CBU imports
Platform sharing	K1 (Exter/Nios/Aura), K2 (Creta/Venue/Alcazar), E-GMP (Ioniq 5)	K1 (Syros), K2 (Seltos/Sonet/Carens), E-GMP (EV6/EV9) — all shared with Hyundai
Engine sourcing	Group-common families; own engine plants at Chennai + Talegaon (engines from Jun-25)	Group-common families; Anantapur engine line
Exports (latest)	163,386 units FY25 (c.21% of sales); c.26% of revenue FY26	27,953 units FY26 (c.10% of output)
Export target 2030	30% of output	double CKD exports

Capex	₹45,000 cr / c.\$5bn FY26–30	undisclosed total; 2030 volume/share targets
2030 volume target	11.44 lakh capacity; 1m+ output ambition	4.10 lakh domestic, 7.6% share

Recommendations

- **Model HMIL capacity as 9.94 lakh (FY26) → 10.74 lakh (FY28) → 11.44 lakh (FY30), all company-confirmed.** Treat “Chennai >90% utilisation” as directional (press), not company-guided; press HMIL IR for a precise consolidated utilisation figure before publishing.
- **For Kia, use c.3 lakh as the well-documented installed base and carry the 4.30 lakh management figure as the current company line, flagging it as unreconciled with the 2022 third-shift number.** Treat the +2 lakh line as an option under study, not committed capex. The 4.10 lakh domestic / 7.6% share 2030 targets are the anchor for the domestic thesis.
- **On exports, correct the thesis: Kia DOES export but is structurally de-emphasising it** (85,756 peak FY23 → 27,953 FY26). Hyundai is the group’s India export engine and the more relevant export-thesis name; watch Talegaon’s ramp as the incremental export-volume driver toward the 30%-by-2030 target.
- **On platforms/powertrains, model shared-BOM economics:** the Creta/Seltos and Venue/Sonet pairs share platform + powertrain, so component-cost and localisation trends move together; the key catalyst is the c.2027 K3-based next-gen Creta/Seltos with hybrid.
- **Benchmarks that change the view:** (i) Kia FID on the +2 lakh line or a second plant; (ii) HMIL Talegaon reaching 250k ahead of 2028; (iii) Exide LFP line going live (currently delayed); (iv) Hyundai export share crossing 25%; (v) GST slab stability — any reversal of the 18% small-car slab would hit sub-4m SUV economics for both.

Caveats — where the data is weakest / sources disagree

1. **Kia installed capacity: 3 lakh vs 4.30 lakh.** The 3 lakh (third shift, February 2022) is well-documented; the 4.30 lakh is a 2026 management characterisation (Atul Sood, via Team-BHP) not tied to a specific announced line. Confirm with Kia India before using 4.30 lakh as installed capacity.
2. **HMIL utilisation** is press/channel (“over 90%” Chennai), not company-confirmed. No precise consolidated figure published.

3. **Kia FY25/FY26 export figures** (26,892 / 27,953) trace to SIAM-based secondary sources (CarWale/Autopundit), not a Tier-1 wire — confirm against a primary SIAM release if precision is critical. The trend (sharp fall from the FY23 peak, then flat) is internally consistent.
4. **Kia cumulative export definition conflict:** c.287,000 (SIAM CBU basis, Feb 2026) vs Kia's own c.3.67 lakh (all-in incl. CKD, late 2024) — different definitions; do not present as a contradiction.
5. **"Hyundai controls diesels / Kia controls petrols" within the group** — not verified; evidence points to centrally developed, jointly shared engine families. Treat the allocation framing as unconfirmed.
6. **New 1.2 3-cylinder hybrid base engine** — press-reported, not company-confirmed. The India next-gen Creta/Seltos hybrid is reported to use a 1.5-based two-motor setup.
7. **Engine cross-supply between HMIL and Kia India plants** (who supplies whom) is not clearly documented publicly.
8. **Kia's SVolt/Xite battery arrangement** — the documented group route is the Exide LFP MoU (delayed); a distinct Kia-SVolt/Xite India deal is not clearly evidenced (Exide holds an SVOLT technology licence, which is the likely origin of the reference).
9. **Engine power/torque figures** are indicative and vary by tune/model year.
10. **HMIL FY23 vs FY24 export figures** vary marginally by source (SIAM vs company); use SIAM 153,019 (FY23) / 163,155 (FY24) / 163,386 (FY25) as the consistent series.
